Hi All,

I'm still working on this. most of the debug code has been removed, and locks have been added for a schedule and the code that sets and reads the project times. It seems to be working well here, but it's hard to know with an intermittent problem. I may just be getting a luck streak.

Let me know if anyone has a chance to try this.

All the best,

Mike

Haven't got on it yet, I'm up to my ass in alligators. But ASAP,
hopefully tonight :D

At the risk of sounding like the moron that I really probably am - What is
PSCL?

Do I need it?

Gantt

I'm so glad someone else asked this question, and that it's been answered
:)

Were you two just asking for an acronym explained, or did you want
further info on what the PCSL does? Chris Thoman wrote a couple of good
technical backgrounders on it five years back.

http://www.svn.net/artguy/paris.notes/3-04-02

http://www.svn.net/artguy/paris.notes/1-23-03b

used to store audio and meter data...' make you glaze over, I think I
might have assembled enough of a layman's understanding to explain it a
bit less technically.

Or maybe not. I'm not sure.

I was, in fact, wondering about the actual What Does It Do part. It looks
like a Windows thing. Am I right?

Nope. It's a software library that interacts with the paris hardware. It's
required on both platforms, even if it's not called the same thing :-)
