Well I am here to break every Paris ,right ? :)
Well,
I have succeded so far having 5 adat cards on three mecs !
That is on Mec1 which is attached on main submix1 I have two adat cards, yahm,yahm...
On Mec2 attached on submix 2 I have another two adat cards ,yahm,yahm...
On Mec3 I have one adat card attched ...

Now that is an achievement under XP, right ?

What did I do ?
Well I could not have the second adat on Mec3 (submix4) but it loaded on Mec1 (main submix1).
I don't use there any input output cards anymore although after this success I am pretty sure they can coexist, anyway I don't need any there !
What I have concluded here:

Paris maybe does NOT like more than one adat card on the very last mec tat is attached on the last eds card as Paris sees them.
I have detected upon startup the row that Paris sees the Adat cards and it goes from left to right of mec slots identifying the cards in the row that submixes are represented by them 1...x (4 in my setup)
Also I am using slots numbered 4 and 6 for the double adat modules counting always from left.

SO my cleverness (soory about that) says that you may load many adat cards on your mecs if you keep your last mec with maximum one adat card.
PLEASE check if possible to finally get hold of the whole Paris - ADAT picture under XP.

I will certainly try when I get hold of another adat module if there is a way to have two adat modules on last submix Mec.

Hope this is of much help to the experimental type of Paris users , where are you DJ ?????
Regards,
Dimitrios

OK Neil send me yours I will do that or should I visit you there ?
:)
Regards,
Dimitrios
