Seams like any plug-in I try and use needs to be adjusted for latency. I do use a wraper on my UA-1 powed plug-in's too as you know and it's very late. I just don't know if you adjust in the wrapper or in Paris Pro.

2) where do you do this at and how??

Thanks guys your the best.

Jeff

Short form - PARIS, which was released in 1997 and discontinued in 2001, has no PDC (latency compensation). One workaround is VertexDSP's FaderWorks; there's some info on it on this page which might also help explain some of the back story.
