When I select "export stereo file" from the audio window the "type" defaults to .sd2 and I have to change it to .wav every time. Does anyone know how or where to change this to default it to .wav?

Thanks,  
Wayne

This came up in the last year and at that point no-one knew of any way to do this. Guessing the code is what's needed (as opposed to one of the editable .exe files we have as end users).

Yeah sd2 is really no longer the standard.
