Subject: Dual Core AMD woes

I've been looking back through earlier postings and found a bit of info on Dual Core processors. Someone mentioned problems with the C16 in particular. Since installing the dual core processor, I have had just such problems. The C16 will lock up, mouse functions still work and I can save a project, but I cannot play or move the "now line". Some times I have to restart Paris several times to get things working.

Has anyone discovered any work arounds to the dual core problems? I hate to give up the dual core since it solved some other bottleneck problems I was having with other programs. Since installing the dual core processor, my old Waves pluggins stopped working in my Samplitude program as well!

Any help out there?

Rob
