The author promised me a new upgrade for Faderworks tailored to us Paris users
!!!
This the page where you put all your plugins names and known latencies so
every time you put a plugin on your audio track you just push the om button
and all other Paris audio tracks get alligned !!
What else could we ask from a third party plugin developer ??
He first made a PDC for us when I kindly asked him so and then he makes this
update to make it even better for all of us Paris users (am I alone ??)
For all thos that have not bought Faderworks please do so to show our gratitute
because he will make our work with Paris so much easier !
DeeJ come on back we are waiting for you, jump on Paris again !
Regards,
Dimitrios

DJ is too busy working with an app that the developers have the source code
too.

John

Dear John,
What do you men ?
Paris code ???
Any more details ??
Thanks

Dimitrios

Hey Dimitrios,
I see ver 1.2.0 on the Vertex website but that is from February/14.
Is this a beta version you're testing?
Tom

Hi Dimitrios,

This is huge!!! I did buy faderworks to support the cause. I'll have to
get this update.

Great stuff!!!

Mike

This is the Alpha version.
In a few days I will the full beta version to test...
I truly believe that faderworks is a godsend plugin for Paris.
Not to overcome the 32 groups it has where you can solo mute and change volume
for ecrtain audio tracks across all submixes !
Cheers,
Dimitrios

the Alpha version.
In a few days I will the full beta version to=20
test...
I truly believe that faderworks is a godsend plugin for=20
Paris.
Not to overcome the 32 groups it has where you can solo mute =
and=20
change volume
for ecrtain audio tracks across all submixes=20
!
Cheers,
Dimitrios

I've been slammed recently, but in a week or 2 might come up for air. I will
definiatly get the fader works plug and also Mike's Reverb that I've been
hearing so much about then. I haven't forgot! Just to busy drumming.

Now Aaron, it says right on ID's web site,"New products coming soon... "

Sorry, I couldn't resist;)

Thanks to Mike A. and these guys, there are new Paris products in 2008! :

Guess it's time to complile a list of known latencies for plugins...maybe
the new Wiki site might be a good place to put these

thoughts

You're right, these guys are a blessing for paris. For me though the features of paris are too long in the tooth. Things like 16 channel submixes I find really limiting and I could never go back from Cubase. I wish everyone the best and hope you make tons of great music. Edmund the ass clown needs to release the fucking source code and get over it with the stupid pace challenge shit.

He's got balls of steel thinking he can make money off new licenses and give zero support.

Then you guys could really push it to the final limit instead of leaving the hardware shackled. I bet some bright programmer could even totally rewrite paris or figure out a way to get cubase or reaper to interface with it making limits like the 16 channel groupings transparent. You never know.

I've played around a little with the old version of Faderworks, and missed the posibility to manually punch in the overall latency. I sometimes use virtually submixes, and this feature will make it more easy to maintain a constant latency across both live and virtual submixes. Is it possible to implement this in the new version?

I.o.w. what I'm looking for is the possibility to set a fixed, global
latency that overrules the automatic one.

I believe we got the answer here why Edmund need the source code for
himself:
http://www.intelligentdevices.com/

So, in a year or five, it seems "soon" things will be happen with a new
Paris version;-)

Yep. Classic type of material for the Wiki.

Getting a page up on this with a look-up table (and what latencies translate to in clicks on the "nudge" buttons) will be coming ASAP. Contributions welcome!

I want to handle things like this as a coherent project so it all winds up in the same place in an easy-to-access format. I'm thinking the best way is Excel spreadsheet; my wife just happens to be a database wizard and says she's happy to whip up modern, easy-to-use front ends for the website - all we need to do is the data entry.

Dimitrios, I'm wondering - I've never used FaderWorks, but seeing as plugin latencies are absolute and repeatable across systems - are there any plans to include a database of the commonly used plugins so Faderworks just recognizes them and sets their latencies automatically?

Yes, I know it's lazy - and the current version doesn't seem to be much of a hassle at all. But you gotta admit, it'd be elegant. All that seems necessary is for the most commonly used plugins to be databased by Faderworks in advance rather than being manually entered and for the software to do what software does best (which is to go look stuff up and write it somewhere else). Or maybe I'm misunderstanding how it works, and it does this already?

Ok..Now, I'm on-board with fader works. I'll be back on Paris this summer..So,
this update is a good one..

P.S. Maybe we could get those folks ove at Solid State Logic

http://www.solid-state-logic.com/music/Pro-Convert/index.asp

(EDL Convert) to write a session conversion for Paris. That way tjose of
us who are on other DAWS, can open other formats and so on..?? It's worth
a try..

Kerry,
The uthor refused to make a ral pdc because of some restrictions that vst
plugins give.
Anyway maybe you did not understand how Faderworks new version will work.
Ok...
So you have a bunch of plugins.
You collect their latencies, someone , maybe me, will post the most used
plugins with their latencies...
Then you just make presets inside faderworks with name and latency.
For instance
Waves rvox 64
Waves rcomp 64
Drumagog 175
etc

Then whenever you put say rvox on a paris audio track you just will scroll
your column inside faderworks until you find the one named rvox nd just hit
the on button !
Thats all !!
All other faderworkds instances on all other paris audio tracks will get
delayed by that latency !
Its a damn clever sustem.
It even substracts latencies !!
So if you have a overall 256 samples latency and you put a plugin on a new
track that has 64 then the 256 overall does not change but the above track
gets delayed by 256-64= 198 !!!

He is damn clever guy !
Hope this helps,
Regards,
Dimitrios

Then whenever you =
put say=20
rvox on a paris audio track you just will scroll
your column inside =

faderworks until you find the one named rvox nd just hit
the on =
button=20
!
Thats all !!
All other faderworkds instances on all other =
paris audio=20
tracks will get
delayed by that latency !
Its a damn clever=20
sustem.
It even substracts latencies !!
So if you have a overall =
256=20
samples latency and you put a plugin on a new
track that has 64 =
then the=20
256 overall does not change but the above track
gets delayed by =
256-64=3D 198=20
!!!
He is damn clever guy !
Hope this=20
helps,
Regards,
Dimitrios

Re: Faderworks new update !!! see how it looks !!!!!!!!!Hi Kerry,
I'm thinking the GUI won't be aware of what's going on behind the =
scenes.
Is that what you're saying also? I'm also thinking that even though it =
looks
lined up it won't sound lined up and still the lines will have to be =
redrawn
visually incorrectly on all the tracks. I hope I'm wrong.

The next step would be to have Faderworks tell us what the total latency =
in use
is then we can offset all automation by that much across the board. =
This would
also necessitate all automation being written before plugs are applied. =
That's
not usually how I work except for tom gating once in a while.

Kerry,
The uthor =
refused to=20
make a ral pdc because of some restrictions that =
 vst
plugins=20
give.
Anyway maybe you did not understand how Faderworks new=20
 version will work.
Ok...
So you have a bunch of=20
plugins.
You collect their latencies, someone , maybe me, =
will=20
post the most used
plugins with their =
latencies...
Then you=20
just make presets inside faderworks with name and =
latency.
For=20
instance
Waves rvox 64
Waves rcomp =
 64
Drumagog=20
   175
etc

Then whenever you put say =
 rvox=20
on a paris audio track you just will scroll
your column inside=20
 faderworks until you find the one named rvox nd just =
hit
the on=20
button !
Thats all !!
All other faderworkds instances =
on all=20
other paris audio tracks will get
delayed by that latency =

!
Its a damn clever sustem.
It even substracts =
latencies=20
!!
So if you have a overall 256 samples latency and you =
put a=20
plugin on a new
track that has 64 then the 256 overall =
does not=20
change but the above track
gets delayed by 256-64=3D 198 =
 !!!
He=20
is damn clever guy !
Hope this=20
 helps,
Regards,
Dimitrios
