A long time ago, I had taken advantage of the fancy-ass digital printer/copier at work to print off the full Paris manual for both the original OS and 2.x. Put 'em in nice, pretty binders with dividers and shit like that.

Last winter, I stupidly left the hose on the faucet in my courtyard and the faucet split. I was going to change it, but wasn't in a real hurry because I knew not to turn the damn thing on.

Our condo handyman, however, didn't get that message, and when he came around to power wash our fence and solarium, he hooked up to my faucet. Didn't tell me he was coming or when he was going to be here.

So, I get home to discover an inch of water over most of my basement floor.... and apparently, enough had seeped over to soak into the bottom of all my manuals (I had also printed out the big-ass manual for my Oasys card.... that was also a full 3" binder....). So, they got ruined and all mildewed, so I had to pitch 'em.

However, I can't find the pdf's for the manuals now - where the hell do I find them?

Oh - I fixed the damn faucet.

Good thing my basement isn't totally finished or I'd be really, really pissed....
