Hi all, I thought I would share some photos of a project I just finished.

I started with my Korg SG-1 that I bought in 1985

I gutted it and removed the stock Korg 76 note keybed and replaced it with a 61 key FATAR hammer action keybed.

leaving it looking like this.

then I filled it up again with 1. an Emu 1616m microdock (under the cover to the left of the keys. Then top left to right 2. the Emu 1212m mother and daughter cards, 3. an Intel mini ITX motherboard
with a dual core 775 CPU and 2 gigs of RAM, 4. power supply, 5. HD, 6. MIDI card from a StudioLogics SL 161, patchbay. To do this I had to extend and box in the back 1.5 inches

Leaving me with an awesome open source VSTi keyboard..

Thanks for looking..
