My buddy Swen had this error message pop out of nowhere today. Everything
worked fine last night, now he can't get Paris to fire up.

unhandled exception: c0000005
at address: 77c3f5ea

Anybody?
Jimmy

I am not sure if this is the same exact error message I was getting while
trying to use Amplitube, but it did crash Paris so badly that it wouldn't
start back up. I had to uninstall and then reinstall and then go into my
Paris config file and disable directx. Not sure what plug-in might be
causing this (if in fact it is a plug-in at all) but it definitely sounds
like that is what's going on.

I agree. That looks like a plugin problem.

Good luck!

Mike

Well, funny thing is, we just started using Autotune a week or two ago. I've
been having some occasional freezing-up problems on my computer; I wonder
if that's also related?

Is anybody using Autotune with Paris succesfully? If I disable DirectX, we
won't be able to use Autotune, right?

Jimmy, I use a Direct X version of Autotune (can't remember which off the
top of my head)...I'm certain it's an earlier version though. I've never
encountered any problems...Paris 3.0

I use Autotune 4 with Paris 2.2 and I haven't had any problems at all. I
have also used older versions with no problem.
