Hello all, Happy New Year, albeit a bit late. Is anyone using the VST version of Tascam's Gigastudio with Paris, Tascam GVI? If so what type of power does it suck out of your processor and does it place a heavy burden on Paris functionality? What kind of processing power are you using and how is it working out? The thing looks pretty cool. I'm still using a dedicated computer to run Gigasampler. I know, I know; I'm still in the stone ages.

Rich

About the capitals, I'm not yelling here, just copied and pasted an ebay auction for expedience, in case anyone is a bit "case" sensitive :-)

Thanks,
Rich

to be honest, I can't recommend anyone fool with tascam/giga support channels. I bought a package deal about mid last year, and I still have no relief on getting giga to work. I bought into a hardware packaged soft deal

and got the upgrade. The package didn't include serial/key info, and they
tell me they can't help me at support because I have no key/serial.
Nice job guys :/

I'd be looking for a lawyer at this point...
....seriously.

It's breach of contract at the least (the EULA is a contract,
since you have to agree to it), and consumer fraud at worst, if
you've legitimatley purchased something and are subsequently
 denied the right to use it.

Make a few phone calls & find a lawyer that's looking to make a
name for himself... you can set a precedent.

You're probably right about this man. I'm going to install this monstrousity
to a new box, fresh, and try it one more time before I whip out a lawyer on
them. The biggest issue is getting them to communicate... email, wait at
least 24 hours, email back... wait 24 hours. Nobody seems to want to answer
the phone, so it's unfortunately the only channel I've found open to
conversation.
I just don't dig conflict and strife :(

btw.. never heard a word back on the Sixx AM deal from the mastering house.
Did you ever get a chance to listen to the album?

Wow Aaron, that's a real PIA. Did you try talking to the retailer who sold you the package for some support, i.e.. have them deal with Tascam? Or did you buy it from a private seller? Which product are you talking about? I absolutely love my old Gigasampler, but I too have had some support issues with them. I bought a used software package and the previous owner never transferred the license to me completely. So instead, whenever I call up for support, I just use his name, LOL. If you can't get it to work maybe you should call a lawyer, but what a waste of time and trouble. Sorry to hear about this bud.

I once knew a girl name EULA
Who lived in a town named Fallujah
She wore a hijab, and worked in a lab
And no way would ever have screwed ya

Rich :-)

What I don't dig is not being able to use something I paid for... you should file a complaint with the consumer fruad division of the Attorney General's office in whatever state their US headquarters is located in - include a picture of the software CD and/or box... that way you can prove right off the bat that you're not someone with hacked piece of warez... you've got a legit version. Let the government do the heavy lifting for you. Do the same thing with the Better Business Bureau in that city - they have no enforcement capabilities, but they'll get SOMEONE on the phone to help you, i'll bet.

No, still not the CD - just the radio cut, over the air.

Neil
