h resistant (loose) power connections are often equally guilty.

ground lines for each outlet and orange duplex outlets. This is better than
nothing.

Gene;o).........well..........knowing m

Interestingly enough, the version of Melodyne Uno will process
stereo only and for an entry level price. $150 street.

 http://www.4beatz.com/proddetail.asp?prod=1011014&partne r=google
" Celemony Melodyne uno is a stand-alone application running under Mac OS X
and Windows. Melodyne supports CoreAudio, DirectX and ASIO2. You can also
integrate Melodyne uno into your existing production environment using
ReWire. Melodyne uno reads and writes a large number of audio formats (WAV,
AIFF, SD2, SND) in mono or stereo and in up to 24-bit / 96 kHz resolution. "

I use ACPI and there is no problem with assigning cards.
But magma pci host card refuses to work on slots 1 ,2 ,3 on ASAUS
motherboard but works on 4,5,6.
If I use powercore and UAD1 (poco can share with UAD1 alright) inside
Magma no problem ,but EDS cards do NOT work inside magma at all, too
much distortion right away...
Regards,
Dimitrios

>Hi,

I finally got round to buying a copy of No Limit on Monday, but as yet it's
not arrived in my inbox from Chuck... any ideas anyone? I have e-mailed him.

Also, the download link for the manual is broken
(http://www.greatidea.com/paris/nolimitmanual.zip)
- perhaps someone could mail me it (or let me know if there's anything vital
in it). I know there's a bug so you can't set 0.0 or 50 as time values...
and that generally you should set around 0.25 or 0.26. Any things else? Tip.

Many thanks,

DanielAny feedback on these? Wondering if they're worth getting, or should I stick
with the stock Paris eqs and Waves + Waves RenEQ + Soundforge EQ.

Thanks,
DanIf you have to go to the trouble of pulling the lid from the case,
stick an Ohmeter across it to see what the value is. Appreciate it!!

Don't ya just love this place!!! :-)

David.
