No, not "mixing WITH mono!" I have a client who wants his CD to be in mono.
 It's an interesting thing mixing in mono.

More to come...

Harder than you thought huh?

Have you tried shutting off one monitor speaker? Things will change
when you do...

I always forget to check my mix's in mono. It really sounds blah. But the
last time I did it, it revealed some loudness/leveling issues.

Harder in some ways, easier in others. Definitely interesting. I have listened to mono thru one speaker but in the real world these mono mixes will get played thru two mostly. I will do some single point checking though...
