Subject: Paris makes static sound/ground loop?

I'm getting blasts of short static sounds. On every project so it's something
in the set-up. I also was reading the Laptop noise thread and thought this
is my problem too.

If it is a ground loop, would it be electrical for the computer or the pre
amps or various other outboard gear I'm using, or could it be any other problem?

thanks,

michael

This doesn't sound like a ground loop issue to me - could be some kind of
clocking problem or software/hardware issue. You might check your EDS cable
connections and might also try re-seating the card.

cool, thanks Carl, I'll try that. It seems to be better since I tried the
grounding problem, but I'll give it more of a workout tomorrow to see if
I get any more noise explosions.

I'll ditto Carl's thoughts - sounds like clocking problems to me as well.
