What exactly is this software? Is it a DAW?

Independence Free is a free sampler/sample player with a 2GB library. It's
free!

Hi James,
  They use a syncrosoft dongle like Steinberg. You can put all the
yellow Tools stuff on one key if you are using the retail one.
their whole product line is awesome. I hope they get more notice in the
US their sampler it the most flexible I've seen. It's the only I've seen
that can properly use multi-core CPUs. The filters and effects are very
good.

The Free version is nice. actually has some usable sounds.

Chris

Yellow Tools makes _amazing_ stuff. Super hi-fi. I haven't used it much in recent years, but it was superb when I dealt with it last. Shame about the iLok.

FYI, there's no iLok on the free software. They are talking about putting out a 70GB+ library on a hard drive or hard drive raid.

East West is talking about doing the same. SO Platinum is already 138G on over 30 DVDs,
and the new SP Platinum Pro/Play version will have 16 bit samples as well (basically Gold XP + Plat XP),
which I think will break the 200G mark.

The only caveat I see to drives for distribution would be lifespan - drives eventually die, but maybe before then
we'll have 1+ TB optical disks to back them up on. ;-) Sure would be a heck of a lot faster loading up libs though.

The YT boys are friends of mine. Every great audiosoft company has one person who has great ears, great coding capability or in this case great sampling capability. In this case it's Drazen, who is stark raving mad, a stone cold genius, a staggeringly talented keyboard player, and a workaholic. He's their secret weapon.

Great guys to,

TCB

Speaking of that, I was thinking about investing in a company back in the
90s that had this technology. They supposedly had a disc the size of a CD
that held 10 Terabytes and had a disk on the way that would hold 100 terabytes,
it was also suppose to be write once recordable. Glad I didn't buy in to
that. Maybe some day will have this in our hot little hands.

I had wondered what had become of that technology:

http://www.ddatainc.com/
(current owner after Constellation 3D went belly up)

I wonder if it will ever see the light of day. I think there are a couple
of other high density technologies in development as well. I seem to recall
reading about a molecular storage concept at one time.
