I'm sorry for the lack of specifics, I was re-posting from another post that
had all my info.
Anyway here is the situation:
I have an HP with a dual core AMD X2 proc. It has 2gig of ram and is running
XP home.
I disabled the onboard video card and I am running a PCI-E card.
There are no PCI conflicts.
 installed the proper xp drivers and subsystem in the correct folder.
I copied the Paris pro folder onto the C: drive and ran it from there, but
that seemed to make it crash more.
I can open and run Paris, and close usually without errors. If I try to run
Paris a second time, it will crash, and then if I try to run it again it
sometimes works.
I have had some fatal exceptions while working on a project, not that I never
had that before, but it seems to be happening much more often.

I noticed that I can't save presets for native plugins, also.
Do you have any ideas?

Thanks,
MIke P

Find a manual. It's very common for slot 1 and the PCIE to share IRQ
which is NO GOOD.

Sharing IRQ's is something that win XP does fine...that's not the problem.

I don't know what motherboard it is, the model is HP 1540N and on their site
I can't find the make of the motherboard.
The Video card is in the only PCI-E slot and the Paris Cards are in slots
one and two. I can't move them because the bottom slot is too close to case
for the card to fit.

Wouldn't that show up in System resources? It shows them on different irq's.
When I was having an IRQ conflict with the video card, the transport functions
would lock, but I am not having that problem anymore.
My video card is a dual monitor nvidia

My experience is that if your motherboard shares Video card IRQ with EDS cards (i had two EDS cards though) you crash hard even on XP.

Can you do a fresh install of xp on that shitbox and then just put paris
on to get this pig going?

hehehe

At least with a fresh install you'll know where you stand as much as a
pain as it is (unless you have ghost images).

I know, I know, you shouldn't use "off the shelf" computers, but to build
this machine would have cost me much more, so I thought I'd try it.
Would it make any difference between using XP home and XP prof?
