Some of you may remember me posting a few months back, looking for someone with a PARIS studio, and maybe a bit of data recovery experience. A gentleman responded to me via email, and I have lost the message. A data recovery person would be fine, but I just thought I would shoot for someone who would be sensitive to my situation, and maybe not charge me 3 grand. If you are the Texan who responded, by all means, tell me!

I sold my entire studio a few years back, and kept only a SCSI drive full of unmixed songs and bits of ideas. The drive spins but will not be detected by windows. i have tried multiple SCSI adapters, booting into Linux, etc. GRUB gives geometry errors. I just want the 30 or so Gigs copied to a SATA drive. It's probably 99% garbage, but there is some stuff that I'm sentimental about buried on there somewhere. i need the whole file structure copied over. It's also important that I don't risk any more (?) damage to the drive.

If anyone is interested, please let me know.

If you are in the Portland, OR area, that would be a huge plus. I could pay a fee up front, and if it works, give you more.

here is some info on the drive

IBM Ultrastar 36Z15 Drive, model# ic35l036ucpr15-0. This is the 36.7 GB, 15,000 RPM unit. (80p ULTRA 3 SCSI)

I had to get an ultra 160 controller  
and sca adapter 80 pin to SCSI 3  
(with power)

Not sure what you would need. I know jack about SCSI. It may just be a jumper setting, in which case you could make some quick cash. I think it's probably more though. If you are local, know about jumpers, and what all that parity and stuff means, I'd be more than happy to give you 50 bucks to try it out.

coldstatue att geeemail dat commm (first part is correct)

Thanks

No. I made up a fake last name because there is a dude on here who just goes by "John" as I wanted to. he requested I add a last name, or at least a fake one to differentiate.

I don't know if this will help, there are some audio guys in portland that

might be able to help you. Justin runs <http://www.audiotalkback.com>, he is in portland and there are some other guys on that news group. Most of those guys are studio owners, they use Pro Tools and other software, but they might be able to transfer your files and they are local.

Well, that's no good... if you're going to make up a fake name  
it should at least be something somewhat Python-esque, like  
John Praline, John Smokestoomuch, John Blackmuffin, or John  
Twiddlyhamster.

:D

I was thinking I'd go Native American... maybe John Expanding Belly.

Hi John,

Justin Arey and I are good friends, both living in PDX. In fact, we work together at Xerox in Wilsonville.

I spoke with him this morning re: your SCSI issue and he's definitely interested in hearing from you. He's got all the machines necessary and if you can supply the drive, controller and cables, I'm sure he'll be happy to assist.

The email address that James provided is correct.

Best of luck!

Mark

Hi John - I live in Portland and might be able to help. Please email me at  
justin@jyaf.com - I'll email you back my phone number.

Thanks.

Justin

That's fantastic. I'll shoot one over in the morning. I hope I still have the controller. Might have to order one.  
Thank you

John,

Justin IS the person referred to in the first response.

Mark
