I'm blowing out my rig here and installing everything new. In the next few I'll be at SP1a. I've never put SP2 on my paris rig, never had a reason to and things like firewall and DEP made me nervous.

I already have it back up and running with the required 3 displays, 2 EDS cards, SBS 7 slot and a few PCI cards (USB, 1394, NIC, etc...). I want to keep this build simple and to the point and put the UAD/VSTi thing of on another machine so I'm more concerned about stability than things taking away CPU time (xp1900+, Asus A7s333). The heavy lifting for virtuals will be on the other box, yet to be built. Probably will also use a crossover cable to feed tracks back and forth as necessary. Machine will not ever touch internet.

I wanted to poll the group on one thing:
Has anyone found a reason that they -should- install Service Pack 2 to Paris for?

AA
