Subject: Paris ADAT sync to Pulsar II for sample accurate lock.

Hi everyone, here is a copy of what I posted over on the PlanetZ Pulsar forum:

Hi everyone, thanks for looking, here is my setup:

Paris system / proprietary HW with ADAT card (master)
Cubase SX3 using PULSAR II (slave)
Both apps installed in i7 PC , XP pro SP3

Have Cubase set to "ASIO Position Protocol"
Lightpipe send/return connected to Paris and Pulsar
ADAT 9pin sync cable connected to Paris and Pulsar

Problem:
When I hit play in Paris app, Cubase playback starts but after 2-3 seconds jumps forward a little
then 3-4 seconds later jumps back a bit and eventually seems to settle in place after 20 secs or so
but not consistent sample accurate by a long shot.
I have tried tweeking the sync setings in Cubase but still have prob.

Any help I could get would be greatly appreciated.

Thanks
Roby

Is anyone here using or have used PulsarII sync to Paris reliably, did you experience this funky
behavior?
I am about 24hours away from picking up an RME 9654, this should work rite?

Thanks
Rob

What's an HDSP 9654? A quick search of RME's site doesn't show them. I have a 9652 myself
and its sync with PARIS is rock solid. I'm pretty sure Dimitrios had the Pulsar rocking with PARIS,
maybe he'll chime in.

Sorry, my bad, that's 9652.

The 9654 is the one that comes bundled with Paris 4.0...!!!

Cheers
