Hey Lamont - word from a beta tester that's been using it in Hollywood for a while

is that it does work great.... at least until Digi release PT 8 and intentionally cripple it again...

We all know it's inevitable... incompatibility is job #1 at Digi....but I guess there's hope
Digi will leave it alone.

This app is a lifesaver (I have v4.2 from when it was EDL Convert).
You are going to love moving freely back and forth.

Dedric

I think they have this App Ready for Prim Time. It even converts Pro Tools
7.x WOW!!.. I hate editing in ProTools..I LOVE editing in Nuendo. SO... If
this app works like they stated, I can now take the Pro Tools sessions and
work in Nuendo..

I think you're right about Digi throwing a wrench with PT 8. Let's keep our
fingers crossed.

Thought:

The thought of having a real-life "Tactile" controller Euphonix MC/Controll/Mix that's "married" with the software (Nuendo, Logic, PT) is what I have ben dreaming for since the C-16 integration with Paris.

Paris was really ahead of the curve. The C-16 uses Ethernet as it's transmission protocol, which made using the C-16 feel like it was "part" of the Software. No lag, very responsive. I never felt that with the Mackie controllers. They always felt like bad latency.

My point. It's taken this long for a vialbe solution to the that speaks to not only to several DAWs, but Workstations as well.

However, I'd wish most companies would get this 8 thing(faders, mic pres so on..and embrace 16..16 faders, pres..so on..

yes, exactly, i've been riffing on that same point for some
time now, especially with regard to a/d convertors.
