If I had that setup I would track to 2", and probably bounce to Paris to mix, or perhaps to PT, depending on what kind of plugins I needed, but in that case I would mix/sum through the Neve. I've used one of those before, and they really don't suck.

I would definitely NOT mix in PT Mix Plus... HD yes, Mix systems, no way -

set identically. Pan law has to be the same and not just in setting, but in performance (verified before testing). Then you have to use audio files that exercise the full bit depth of the app (24 fixed or 32-bit float files preferably). With a large set of audio files, this is a valid DAW comparison approach. If that cancels even to -100dB, you would be hard pressed to say one sounds different than the other.

When I have time, I will run an even larger test (to address those that claim one DAW handles 40+ tracks better than another).

Cool - Elliot Scheiner has a guest Q/A section on the Nuendo forum. He uses the Nuendo EQ from time to time. Most of us dismissed it as typical built-in crap. He likes it (for slight cuts). I think it's okay for that purpose, but not critical EQ. It is a step up from built-in EQs of DAWs in days past (but not as good as Paris').

Regards,

Dedric

The DM has 6 expansion slots each capable of 16 channels of I/O for 96 channels (48K limit, half the I/O at 96K). It also has 3 sets of Stereo dig I/O and multiple analog connections including 24 really good mic pre's... pretty cool. Aviom even makes a 16 channel interface card for their Cue Mix system! Also, Nuendo has integrated Studio Manager software that will do a "total recall" of all console settings saved with the project. Patch 'O-rama dude!! :-)

David.
