
Subject: Don't bother with Firefox 2.0.0.4
Posted by [DC](#) on Wed, 06 Jun 2007 00:38:41 GMT
[View Forum Message](#) <> [Reply to Message](#)

If you use a Mac, don't upgrade to Firefox 2.0.0.4 !

It removes the mouse hold-down option (what passes for right-click with macs) I spent an hour trying to find out why and no one knows. I have a question up on the forum at Mozilla...

More to follow.

ggggGGGRRRRR

Steeenking computers!

DC

Okaayy

What a great forum the have!

If this happens to you, here is the fix:

Type about:config into the location/address bar and press enter.

Find the preference ui.click_hold_context_menus and double-click on it to change its value to True

never mind!

That is one stubborn company. Still no right button or scrolly wheel?
Unbelievable.

While I believe Macs still ship with a one button mouse, Macs have supported multi-button mice for years, it's not a problem.

I use a three button mouse w/scroll wheel, I think it was under ten bucks.

The control-click keyboard shortcut is for those who don't use at least a two button mouse.

Cheers,
-Jamie

FWIW, I use DELL 2 button optical scroll mice on Macs at Expo. Their keyboards work just fine on Macs too.
Unfortunately, the Mac QkSlr dual G4 can't handle a USB kvm, locking up every time :(

Ignorance about Apple and Apple products is the problem with non mac users.
It appears like the Mac mouse is lacking multiple buttons, but it's not.
It's old news, but people only know what they have heard in the past.

If you have a Apple store near you go check it out, find out about their products for your self, you just might be surprised.

check it out.

Boy, you are overstating this a bit...

First of all, no wireless mice allowed in my studio. None.
No wireless, means no communication problems and no
battery failures.

Second, I don't know when the Mighty Mouse started shipping
but millions of Macs shipped without it, and they took a long time
to add this feature.

You don't have to get a wireless mighty mouse, you can get a wired one if you want.

Yes it's true that Apple shipped a one button mouse for years, even mac users thought it was dumb. Apple wanted to keep it simple for new users. Mac users have been able to use multi button devices for about 15 years or so.

I believe the mighty mouse has been shipping for a few years now.

I think it is vary unfortunate that there is so much disinformation about Apple and Apple products. Apple products are great and I encourage all people to become educated about Apple products.

Just trying to educate a bit.

No wireless here either, it was feeding into my guitar pickups.

I've used Macs extensively for a decade. But not for the past year or so. Glad to hear they have started adding buttons.

I like Macs just fine, but I don't respect those idiotic commercials on TV lately. I guess they are not going after the "creative" crowd any more, because anyone with a decent IQ would be able to detect a cheap smear campaign and would probably be turned off by it. I guess that explains being afraid to scare people off with a complicated mouse too.
