Hi Everyone,

I thought that before I dove into whatever is next, I would do a bit of cleanup on some of the older stuff. Pretty much everyone here has bought everything, so I'm just going to post the new files here. If you haven't and like what you see, I could always use the support.

Heartbeat - the metronome. I did some tests and found that it was offset from the bars and beats ruler by a value that looked suspiciously like a pre-roll value. It's fixed.

Paris Compressor and Multi Band Compressors. There was some debugging code that was accidentally left in that created files in c:\. It's been removed.

Tight Bottom. This is a single band version of the multi band compressor that I never got around to releasing. It's great for controlling the low end of a boomy acoustic guitar or a bass.

Enjoy!

Thanks Mike.

Haven't been on Paris for a while but the system is still operational.

Jeff

Hi Mike.

What is "Tight Bottom"?

Cheers,  
Kim W.

Sorry Mike.  
Duh... Should have read the description.  
Cheers.  
P.S. Was this a freebie?
