My primary guitar is a tele style with a mini humbucker in front, a strat
pup in the middle, and a tele in the bridge...a dedicated volume knob controls
the mid pup - think Brent Mason's guitar, but with Duncan Nashvilles in middle
and rear, and a Firebird (not Les Paul) pup in front...

Goes from hillbilly heaven to smooth and clean jazz with the flick of a switch...The
same configuration is available from Valley Arts Guitars (Brent Mason Signature
model) or take an off the shelf Nashville Tele, put in the middle pup volume
knob and drop any number of single coil sized humbuckers in front, and there
ya go.

I think it's fair to say that the Line 6 Variax (500, 300 and 700) have the most amazing breadth of guitar sounds in one instrument. Including presets for those you desire. You can even customize the emulations via their Workbench software.

PRS and Parker are have pickup combinations that cover a lot of territory. Works for me for strat and LP. Some Ibanez models also do very well, and there are others with humbucking/split coil options that would work fine, too.

Cheers,
-Jamie

Are you concerned about neck length/style? If not, I'd get a LesPaul and put separate coil tappable humbuckers in it. I have a GoldTop with this set up and it's got a VERY wide range of sounds. If you don't mind emulations, Variax would be another option.

I tried for years and eventually wound up just buying one of everything. It's really fun when recording, do I use the reissue strat, the LP with soapbars, or the ES-335?

I own a lot of guitars (my fiance says I'm not allowed to buy anymore as they're literally taking up half of my town house). If I had to pick only one it would be my Floyd Rose-equipped '73 Fender Strat with the EMG DG-20 David Gilmore pickup set.

In place of the normal Strat tone controls, the DG-20 has a bass/treble booster and a midrange booster.

Super-jangly Strat sounds (bass/treble booster up) or thick LP-type tones (bass/treble booster down & midrange boost up) + everything in-between!

I love it!

I'm really surprised by the responses here. I expected your PARIS types to be more of a purist lot. I just don't think it's possible to get a swamp ash guitar with the pickups mounted on a piece of plastic and a bolt on neck to sound like a mahogany/maple guitar with a different scale length, a set neck, and the pickups mounted on the wood.

I have a circuit I designed that lets a 2 humbucker guitar do a lot of tricks w/ a minimum of switching. I installed it on my old PRS Custom 24 in the place of the rotary switch (which I used for many years but have grown to hate!). It uses a 4-pole/double throw mini toggle and a standard 3 position switch. With the mini switch in the "normal" position you get a standard Les Paul type 2 humbucking pu guitar. Flip the mini switch and the bridge

position is the two outside coils (closest to the bridge and farthest) in series; neck position is the two inside coils in parallel (PRS calls this "Parallel Strat"), center position is the series outsides + parallel insides in parallel. 6 really useful sounds. The series outside coil sound is my all time favorite. Sounds like a 10 foot tall Telecaster on steroids. If you're interested I'll scan my drawing and post it. You need two humbuckers w/ all the wires available and a 4 pole double throw mini switch to do it... and, of course, a 2 humbucker guitar that you love to play.

For that matter two strats don't necessarily sound alike. :^)

My Variax electric 700 covers an impressive range of tonal possibilities, and my PRS's pickup wiring scheme allows LP-enough and strat-enough tones to shine where those sounds are expected. I've gotten compliments about both guitars from tone junkies. I enjoy playing the PRS more, but the Variax is a goto for gigs where I need ultimate flexibility (including instant alternate tunings and acoustic guitar sounds).

To really rattle the purists, I get tone compliments even when I'm not playing through a tube amp (I know, total blasphemy ;^)

Some good ideas here. But I am in the "buy 2 guitars" camp.

A good LP and a hardtail strat would be the minimum.

Decent-quality guitars are cheap nowadays, you should just buy one of each if you're looking for tonal variations. Part of what makes each guitar sound like itself is the wood, the neck radius (a bend on a maple-fingerboard strat has a different quality than a bend on an ebony-fretted gibson LP custom), the hardware configurations (bridge, tuning key lineups, etc) contribute subtle differences, as do a bazillion other factors in minute quantities.

Get an Epiphone LP Standard, a Squire strat & Tele, find the best-playing ones you can & have them set-up by someone halfway decent, & you'll be a happy guy if those are the three basic tonalities you're looking for without breaking the bank.

Or get a Variax.

Neil

Haha I agree with you! I can't believe it!

My 2 cents. A strat, a tele and a les with a bigsby trem and locking nuts.
Also, a must have is a gibson vintage f hole.

After that an SG and a les junior.

Other areas we will agree on... USE AN AMP!

Yep. But strats can sound very different, too. It's funny, there was a bit of initial criticism of the Variax because the strat emulation didn't sound EXACTLY like the recent strats some people owned. Turns out Line 6 did the emulation based on a particular rare and expensive vintage strat with a particular sound.

The fun thing is you use the workbench software and raise the output levels, change the body being emulated to increase sustain, and get a hotter, sustainier strat sound. Which I did. I matched it with the other "pickup" output levels so when I "switch guitars" I don't have to change anything in my signal chain.

You can even experiment with the emulated volume pot resistor impedance and the tone control capacitor value for each pickup combo in each bank. And drop in different emulated pickups, put them anywhere including on the neck behind the frets, or on top of each other, and rotate them as you please. Go nuts, without soldering or sawdust.

OTOH, the whammy is a bit wobbly and the guitar is not as well built as, say, my PRS. It's also only a 22 fret neck on the electric models, which is weird because there are no pickups in the way to add two (or more) additional frets. On the plus side it's decently playable; the sound is quite good; and the tech is as clever as PARIS, and as reasonably faithful to what is being emulated.

Transposing is pretty good but not perfect, there can be some DSP artifacts especially on non-wound strings. But in context it works pretty well for open tunings, mild capoing and low string octave bass.

> I'm not knocking technology or new gear, not in the least. I'm just surprised
> that _other_ people are using such modern guitar gear as the PARIS community
> seems, um, how do I say this, more on the traditional side than most.

It's possible to appreciate a good trad mag pickup guitar for what it is and can do, and also appreciate DSP emulation for what it is and can do. I like both. Both have been suggested in this thread.

I haven't run into any guitar players that were snobbish about the variac once they heard it. Same for when I use a non-tube preamp setup, once folks hear what I get out of the rig the comments have been good. It all comes down to tone.

> I've thought about a Variac, actually, but not so much for the different
> sounds but so I can store tunings.

On the electric variac my first custom bank is set up with an ES335 neck, a strat bridge/middle spank, a jumbo acoustic, the same acoustic down half a step, and a les paul bridge.

My second custom bank is set up with a DADGAD tuned martin, an octave down guitar (forget which one) for playing bass lines, a drop D tuned acoustic, a sitar, and the ES335 neck.

My third custom bank is set up to sound similar to my PRS in all PRS pickup positions. Who says all you need is strat/lp? PRS's sound great too. :^)

What else...I have a full customized five way strat bank when I want to live just in stratland, and a bank of tele sounds that I sometimes use. I like some of the stock jazzbox emulations. I occasionally use some of the oddball guitars and non-guitar emulations. I have a bank of acoustic six and 12 string models, and some dobro emulations in several different open tunings for slide.

If I'm going to do a lot of acoustic stuff at a gig and I have room, I'll bring the acoustic variac because it's set up with heavier strings so I can lay into it more, and it lets me adjust compression on the fly which is great for fingerpicked stuff (with no feedback).

Cheers,
-Jamie

LOL. Get a room, you two!

I dig those guitars through a good amp, too.

Remember when using an electric guitar and a guitar amp was heresy? They booed Bob Dylan off the stage. USE A REAL GUITAR!! Heh.

Flash forward and now that stuff is traditional

I bet you would both dig my variac setup if you heard it.

And Chuck, I bet you would even like what I do with amp emulations, once you hear some of my custom setups (which stand up to comparison with my tube rig).

Cheers,
-Jamie

Jamie, I'm surprised by your praise of the Variax. I found it disappointingly dead feeling and it seemed to have a latency in creating the sound. Also the instrument was shite and looked like a toy to me, but I don't think it was the expensive model. I do really like the concept of it - maybe I should give it another shot, but they need to make a pretty version. A guitar is like a woman - it should be as pretty as possible, don't you think.

I'm also surprised by the suggestions that tapping a humbucker gives a decent Strat sound. I tried that in 1978 and it sucked. I tried it again about every 10 years since and it sucked every time. Can it have stopped sucking in the new millennia? I doubt it.

If I were mostly an R&B and rock player I would do a Strat w/ a humbucker in the bridge. That's about the most versatile setup I have heard. I actually have a handmade strat with EMGs and a midrange boost knob that does a pretty strong lead sound and of course excels at shimmery rhythm sounds.

To each their own, but it might have been the particular variax you
played and the way it was set up. I've played some 300 models that were
terrible, sharp frets and bad action. Poor QC at the factory? I've

played others that were decent. My variac plays decently.

Whatever very minor latency might be in my variac at normal tuning hasn't put me off at all. It's very responsive, feels like a normal guitar.

When I use the transposing feature there is noticeable latency but my brain has had no trouble adjusting. A little latency isn't a problem per se - for example I don't have trouble adjusting to the latency when playing with an amp stack at the back of the stage (although I don't do that anymore, I've reformed and go for low stage volume/close monitoring now).

I haven't noticed a "dead feeling." The guitar feels as alive as my other guitars. I can even get feedback (the good kind).

In short, my variac gets good tone and is amazingly flexible. I also added a GK3 pickup to it to drive a guitar synth at the same time, and I use that setup with live multitracking in my solo show to build gigantic arrangements. Very fun!

But my PRS is my favorite guitar to play, and I take that on gigs where I don't need to cover acoustic/electric/synth/alt tunings. When I just need to be the electric guitar player in a band, the PRS is flexible enough to cover a wide palette of electric guitar tones and it's a better built guitar. Plus it has 24 frets. Plus I have two of them in case I break a string. :^)

When the new Roland VG99 ships I'm going to check it out. It would let me play the PRS and still do guitar modeling. I think the variac modeling is better than the VG88's but we'll see if Roland has raised the bar with the new box.

Another option would be to take variac guts and put them into a better guitar. Like Adrian Belew did with a Parker Fly. OK I WANT that guitar, (but not in that color). :^)

I've considered transplanting variac guts into a custom body - which would also let me add a 24 fret neck, but then again, my variac is pretty decent as it is so there's no rush. If I go that route I'd grab the guts from a 300. There's no sense gutting my expensive 700. :^)

> Also the instrument was shite and looked like a toy to me,

I dig a good looking instrument, and I have the coolest looking variax on the planet (cherry sunburst 700). Although the very best looking variax is the acoustic model with the natural wood top, I love mine. But I don't sleep with either of them...much...

My cherryburst PRS looks and plays a notch better. I've never had a luthier setup the variax for optimal playability though (since it's been good enough) but that's on my todo list.

> I'm also surprised by the suggestions that tapping a humbucker gives a

> about every 10 years since and it sucked every time. Can it have stopped
> sucking in the new millennia? I doubt it.

Not identical to a strat sound but similar enough to play that spanky role.

Actually I think the PRS does it by combining inner and outer coils from the two different pickups in various combinations. I had an Ibanez Roadstar II that did it by splitting the coils on either pickup with any PU combination available. I could get spanky tones out of both. Not exactly a strat but no suckage either.

> If I were mostly an R&B and rock player I would do a Strat w/ a
> humbucker in the bridge. That's about the most versatile setup I have

That's a great setup. My Kramer is configured like that (although the neck PU is a sustainer driver as well). My Steinberger has hum/single/hum which is also a very versatile setup.

OK, now I guess you can see I swing both ways, a collection of trad pickup guitars AND a couple of variaxen. I use them all. Clearly I'm addicted...

Cheers,
-Jamie

If the guitar makes the right sounds I don't mind if it's a butt ugly
2x4 ;-)

Great advice and I already have the Strat Squire (noisy little thing).

I'll check the Variax again.

Don't you find the split humbucker to be extremely weak and anemic? It has no fullness.

I have no problem with amp emulations. Back in 1999 when I unloaded all my

gear for money for my house re-hab, the only things I kept were my sans amp
psa 1 and peavey vmp2 pre.

Chuck

Feel free to look me up if you're ever in Denver, you can try mine.

If not, try to get a demo of workbench (variix software) and see what it's like to modify and customize the models to taste. Pretty cool. For example, my modified strat model is an improvement on the stock one IMO.

> Don't you find the split humbucker to be extremely weak and anemic? It

I have a Digitech I like. One caveat though:

If your music is built around guitar parts and if you want a signature tone that people will quickly recognize, then emulations are not for you.

No one has ever done a real-sounding HIWATT emulation either...

Amp modeling ramblings:

I also like some of the Digitechs and have a couple: GNX4 (current main gigging setup) and RP2000.

I'm surprised that you're not confident about getting a signature tone out of an amp modeler, Don. Once you go beyond preset patches named after rock stars (I don't use the presets), they offer a really big playground.

The good ones are extremely tweakable. You can choose from a variety of amp models and FX combinations with wide ranging control over multiple parameters.

The GNX4 even lets you warp different amp models together to create unique "offspring" amp models. The tonal range available is huge.

Of course a big part of the tone is from your fingers and instincts, what you bring to any setup. For example, when I played through my buddy's expanded PODXT Live using a decent sounding (to my ears) amp model, I still sounded like me. When he played through the exact same setup, he sounded like himself. IOW we didn't sound alike.

I sometimes use the amp modeling in Logic Pro when recording, and have been exploring NI's Guitar Rig 2. I've gotten good results from both, and it's cool to be able to entirely change the amp model after recording.

(OTOH There are times when you want to record with a sound you know is what you want and not give a non-guitar playing engineer license to screw it up. At a studio session a while back the engineer tried to get me to use a plugin amp emulator on Protools so he could re-amp it later, but his example models really sucked, as apparently did his instincts about guitar tone, so I declined. I went direct from the Digitech and got exactly what I was going for. Happy me, happy client, crisis averted.)

I've also gotten crappy sounds out of all these modelers, so it pays to spend the time necessary to learn how to set them up to your taste. And it's a good idea to monitor through PA systems or studio monitors rather than guitar amps.

There are some modelers I've tried where I couldn't get what I consider to be great sounds - Yamaha, Roland, Korg and versions of the POD from a few years back. They may have improved by now (the PODXT Live seems much better than the old POD, for example).

Cheers,
-Jamie

One more thing. I offered to let one of the modeler companies use my 1968 HIWATT as a reference to make an emulation, and they admitted that they really couldn't get it all that close. They are fine unless you are building the whole song around the guitar.

Which of course is why AC/DC don't use 'em...

heh

Also, emulators get a lot better if you put something nice, like a Matchless Hotbox or a Barber TonePress in front of them.

It also does help if you don't rely on the presets...

Which modeler company?

> They are fine unless you
> are building the whole song around the guitar.

Unless you create a sound using a modeler that makes the song, which is
entirely possible IMO.

> Which of course is why AC/DC don't use 'em...

We should all use only SGs through Marshalls then. Or whatever they use.
And wear English schoolboy pants. The rest is BLASPHEMY! ;^)

I've played a PRS, but I think that is a different kind of circuit than what I am referring too. There is something else going on there I thought.

My best results with emulators are when I run them through a quality tube power amp and a good speaker. I use a Mesa Satellite 60, and have used an Atomic Reactor. Both lift the cold emulations to the realm of great amp sounds IMHO.

I could not use my Tonelab straight into the board. It does not breath for me.

That sounds like a great setup, Bill.

I have a friend who uses a Tonelab through a Bose L1 system for prog and fusion stuff and he gets excellent tone and response even without a tube power amp or guitar speaker. So that's possible, too.

I haven't tried the Tonelab myself but I'm impressed with what he gets out of it.

For my gigs the GNX4 fills multiple roles: I use it as a guitar preamp, guitar/violin multi-FX box, mic preamp, vocal/instrument mixer, direct box and live multitracker. It does all that. Kim can probably relate (he uses one also).

I run my GNX4 direct to the house PA via the balanced XLR output and it sounds consistently great out front (I can go mono or stereo).

I monitor onstage using the house monitoring system, or through an EV 12" 2 way PA speaker/monitor that I bring, or if I want to travel light, through a Galaxy powered hot spot on a mic stand at Guitar height (for easy controlled feedback) - aimed at my ears (lets me keep stage volume down but I can still make the guitar sing). In all cases, I can keep stage volume under control and there's no "spotlight" of loud guitar

hitting any part of the audience from the stack I don't use. :^) So the house engineer really has total control of the mix and the mix is consistent throughout the FOH.

If there's no house PA (small gigs) I can throw the EV on a pole and cover the house, or even add its twin and make everyone go deaf with guitar crunching goodness.

The key for going direct to the PA with the GNX4 and getting great tone is to turn on the internal speaker emulation, and to program the patches while listening through a full range system (I use my studio monitors).

Because I also run my violin, my vocals (the GNX4 has a mic preamp), my guitar synth and sometimes my keyboard through the GNX4, I actually require full range monitoring rather than just a guitar speaker. However when I'm just playing guitar at a band gig, I could probably get away with using a non-full-range guitar speaker. But since the GNX4 sings just fine without it I haven't felt compelled to haul my 2x12 cab to gigs. For my particular setup it's just not needed.

However 2x12 sounds great with my heavily modded bassman 50 head! But that rig no longer has to take the abuse of gigging.

Cheers,
-Jamie

On the PRS they combine inner and outer coils across pickups for some of the switch positions.

Jamie, I really do believe you can get great tone that way. It just does not quite get it for me. If it's a smaller gig do usually run into the PA from the Tonelab myself, but i like to monitor through the amp to get the tone and the stage monitoring vibe that makes me happy.

Absolutely. These things are very useful, and I will not mind in the least if they eventually become nearly perfect. A lot of people always see technology as a "this vs. that" but us gear hounds always want one of each...

heh

Absolutely. We all find what works for us.

There are plenty of options these days. More than I have time to evaluate. So it's great to hear what works for you, and I'm happy to share what works for me.

Cheers,

-Jamie

True. Keeping in mind: "You can't have everything, where would you put it?" :^)

> Bill L <bill@billlorentzen.com> wrote:

Nice.

My Steinberger and my GK250ML have been my carry-on companions when I have to fly to gigs. Small, sweet and loud.

Cheers,
-Jamie

My Steiny fits perfectly into a Samsonite hardshell suitcase. That's the reason I bought it. When I use its gig bag, I almost feel like I'm cheating, it's so tiny.

I use the gig bag, it looks like a tennis racket. I've never had anyone even ask me what it was, I just walk on the plane with the Steinberger over my shoulder, and put it (carefully) on top of whatever is already in the overhead above me. It also makes a great backup guitar to my PRS for local gigs. So easy to bring.

I carry the GK amp in a soft bag. It's only about the size of a boombox and can fit under the seat or in the overhead. But it's heavier than it looks, so I have a little foldup suitcase dolly to drag it around the airport.

Cheers,
-Jamie

Indeed, however.....
what's with the no midi port for pedal control?
