Holy snap! This is huge. I'll give it a try on my single core later, even though it won't tell us much about multicore puters; at least I'll be able to tell you if there are any unexpected effects.

Exxxxxxxxxxxxxxxxcellent!

- K

Content-Transfer-Encoding: 7bit

Well, here's my first real stab at it.

Seems to work well here on my quad core Phenom 9350.

I slowed down the start-up timing a bit when I was troubleshooting my new PC a while ago. I'm pretty sure I can tighten them back up. But for now, it works.

Here's the install steps for the brave. :)

the PARIS_StudioControlLibrary.dll goes in the Windows\System32 folder.
be sure to back up the copy your using currently just in case.

The Scherzo.sys goes in Windows\System32\drivers\. Be sure to back up your current scherzo, too.

Restart, and unless I've just been lucky, you'll have PARIS on a multicore with no special workarounds.

Let me know how it goes.

Cheers!

Mike

Hi Kerry,

Let me know if the new PSCL fixes your PARIS start-up issue, too. I had some weirdness from the last build. I think it was some weird compiler thing. I didn't really change anything except force it to rebuild everything, which it is supposed to do anyway, but I don't think it was.

Cheers!

Still no issues here! :)

I've had a couple crashes on exit. I think I know what's causing them. There's at least one more thredsafety issue than I thought. I think the app is closing on one cpu while the driver is still trying to talk to it on another. I've already started trying to fix it. i should have something in a couple of days.

Cheers,

Mike

Hey Mike,

Keep up your great work. I'm within two weeks of putting it all together here.

Do you think your development on the Scherzo driver and/or the multicore Tom's Hardware fix would help with Hyperthreading on an older P4s? That would help more than a few people out I should think.

Thanks for all the hard work!

Tom

Mike, you are a genius.

Thanks for your dedication,
Rich

It will work on the hyperthreading exactly the same way as a multi core.
The only issue I had last night was I got 2 blue screens (out of many, many
quits) when quitting the PARIS app. While running, I had no troubles at
all. I'm almost positive that the driver tried to signal the app after it
had closed. I started working on a lock to ensure that can't happen. There
may be other issues that come up, but I think we're in the home stretch.

Cheers!

Mike
