-----=\_NextPart\_000\_00B6\_01C5AB10.C45972B0--I am sure there are some of you that have tried or still use the following method.

How to group stereo drumtracks in Paris put them a stereo compressor just using one stereo instance of EDS compressor.

1.I put on aux1 wire out #0

2. I do the same on aux2 putting wire out #1

3.I open aux1 and aux 2 on all drumtracks, here I have one kick, two snares (top/bottom) two overheads (L and R) one ride and three toms

..

4. Now

I was living in Austin during the whole disappearance/search in 1995. It was big news because there was a lot fo money missing. Lots of speculation that she just went on the lam and just not a whole heck of a lot of interest in finding her either. She had become so obnoxious that most folks were just glad that she wasn't around anymore. I think they discovered h

of this group. I've been away from writing and mixing for many months, in  
part due to my renewed fascination with the electric geetar. It was good  
to hear Paris purring out on old mix. However, if I don't reload the scherzo  
driver on each boot (after having removed it prior to the previous shut down)  
I'm getting the error message "Paris engine not initializing error code 61/3d."  
I don't think I've seen this one before, and I can't find any information  
about it in the archives or on Steve's site. I tried re-seating the card,  
and I've checked all of my connections. The system (Athlon 2200xp, Asus  
A7s333, Win98SE) is loaded with Paris in the 2nd PCI slot. Also, what the  
heck is "ACPI IRQ Holder for PCI IRQ Steering." Whatever it is, it's taking  
up alot of IRQ's Can I get rid of this thing????  
Thanks all.

waveform view in the editor window, is there a button, shortcut or  
whatnot to put the now line back in view. If not, what is the best way  
to do this.

Thanks,  
JohnI ran across it in the manual, cleverly hidden in a small section about  
the auto scroll buttons. The shortcut is: CONTROL-HOME

> Aaron, thanks for responding.  
I've got Paris in slot 2 for no other reason except that it was suggested  
to me. I didn't understand why. I figured that higher slots perhaps got  
higher priority on a systems level. I've got my vid card (ATI Radeon 9000)  
in the AGP slot, PCI slot 1 is empty (in part because of heat issues from

the vid card just above it), EDS in slot 2 (as noted), a SCSI controller card in slot 3 (for my SCSI CD writer), slot 4 is open, slot 5 has a Soundblaster Live card. In answer to your question, I can move the EDS card around.

Any further thoughts? Thanks again.

> This weekend I bought a pair of 250Gig SATA Seagates. I was planning to get  
these anyhow, but on a hunch decided to speed them up to try and isolate  
this fault.

On another hunch, I tried loading an OS on to one of these drives using a  
different XP disk.

So far it seems stable. I've loaded XP, SP1, SP2, MB Drivers, Graphics Drivers,  
and formatted the remaining portions of the drives into nicely neat chunks.  
The machine was on from about midday to 9pm yesterday and not a glitch.

It's early days yet, but I'm growing suspicious that I may have a scratch  
in the wrong place on my XP

instrumentation had been composed on a Yamaha keyboard with a mono line out.  
I copied it to a couple of tracks and went to work with EQ as much as I knew  
how to do back then. We dubbed vocals, some percussion and electric/acoustic  
guitars and bass.

<http://music.msn.com/album/default.aspx?album=39173714&affid=100003&stab=1>

I'd have to dig up my notes, but I think anywhere you hear an electric bass  
and/or an electric or acoustic guitar on these, it's gonna be me scrambling  
around

ertebrate retina makes perfect physiological sense.

Thinking his fantasies about eye evolution have nailed the coffin shut on ID, Dennett continues by perpetuating various other myths. For

example, he tries to make ID look absurd by comparing it to the claim that "the earth is flat." But this is a tired old canard. Even modestly educated Christians throughout the Middle Ages knew not only that the Earth is round but also approximately how big it is. The Flat Earth Myth began as fiction in 1828 and was elevated to a historical claim by late 19th century Darwinists intent on discrediting their critics. Dennett should know better.

Dennett then indulges in the usual misrepresentation of ID as an argument from ignorance. "You haven't explained everything yet," is the straw man he erects in place of ID's actual position, which is that design can be inferred only after one knows enough about a feature to justify the inference. An ID theorist does not say "Wow, this is too complex for me to understand, therefore it must be designed," but "I now know enough about this feature to convince me that it could not have originated in a Darwinian fashion but has the hallmarks of something made by design."

Finally, Dennett falsely claims that "proponents of intelligent design challenge any mainstream biological understanding." Apparently, Dennett did not bother to visit Discovery Institute's Center for Science & Culture web site, which would have directed him to some of the scientific research and scholarship published by ID proponents, including experiments that challenge Darwinian evolution.

Instead of presenting any real science--or even laying out the issues accurately--Dennett merely repeats the standard Darwinian mantra: "The designs found in nature are nothing short of brilliant, but the process of design that generates them is utterly lacking in intelligence of its own." This may serve t

spects of biology,  
there are no research studies indicating that Darwinian processes can make molecular machines of the complexity we find in the cell.

Scientists skeptical of Darwinian claims include many who have no truck with ideas of intelligent design, like those who advocate an idea called complexity theory, which envisions life self-organizing in roughly the same way that a hurricane does, and ones who think organisms in some sense can design themselves.

The fourth claim in the design argument is also controversial: in the absence of any convincing non-design explanation, we are justified in thinking that real intelligent design was involved in life. To evaluate this claim, it's important to keep in mind that it is the profound appearance of design in life that everyone is laboring to explain, not the appearance of natural selection or the appearance of self-organization.

The strong appearance of design allows a disarmingly simple argument: if it looks, walks and quacks like a duck, then, absent compelling evidence to the contrary, we have warrant to conclude it's a duck. Design should not be overlooked simply because it's so obvious.

Still, some critics claim that science by definition can't accept design, while others argue that science should keep looking for another explanation in case one is out there. But we can't settle questions about reality with definitions, nor does it seem useful to search relentlessly for a non-design explanation of Mount Rushmore. Besides, whatever special restrictions scientists adopt for themselves don't bind the public, which polls show, overwhelmingly, and sensibly, thinks that life was designed. And so do many scientists who see roles for both the messiness of evolution and the elegance of design.

Michael J. Behe, a professor of biological sciences at Lehigh University and a senior fellow with the Discovery Institute's Center for Science and Culture, is the author of "Darwin's Black Box: The Biochemical Challenge to Evolution." "Aaron Allen" <nospam@not\_here.dude> wrote:  
> How do I back up full AVI 720 x 480 2 hour raw  
> footage in semi to uncompressed formats to DVD's?

Ah, that ol' chestnut! ;o) I had a video project I did a couple of years back, which had about 4-5 hours of footage all up running DV video compression... so 12 gig per hour. Like you say it becomes near impossible to back up. In the end I authored the video and just dumped to masters. I didn't even have a DVD burner at the time. I had to use HJSplit to split the authored product on to CD's and took them in to work to burn a DVD.

Which, incedentally, may be of use to you. Look up HJSplit. It's a freeware util which splits large files into smaller (say 4.5Gig) chunks. Of all the ones I found it was the only one capable of handling something measured in gigs. Mind you I've never used it to split a 20 gig file into 4 gig chunks, but if you're looking for a method of storing massive files it's probably worth a look. After all it's a free util and only a 1-2 meg download or something.

Cheers,

Kim."Kim" <hiddensounds@hotmail.com> wrote:

>

>and just dumped to masters...

...which should read "just dumped THE masters"... ie. I only kept the authored version...

...that typo made that sentence really not mean what it should have. ;o)Beat you on that one Aaron. Check down the posts a little.

;-)

You stated that the famous, though somewhat deranged, atheist Madalyn Murray basically got what she deserved, that her ignominious end was only to be expected given her belief system, or lack thereof. You were clearly implying that anybody who doesn't believe in your god is courting such a sad fate.

That is insulting, not only to the many people who don't share your self-righteous religious beliefs, but also to any sensible person's sense of social propriety.

Just chill out. It's okay to do so! It won't hurt you a bit, really! Doug posted a very funny little link that some of us laughed at. There's no need for any proselytizing...

....or for insults, whether you have the intestinal fortitude to admit to them or not.

Nope. My uncle, who knew her said she was not deranged. Yet,

when one makes the self the center of all morality, denying that it can come from without, one is likely to find another who agrees, and would like to take their money. do you deny this?

so there can't be  
a big brouhaha about the nature of the Spagetti Monster and no one can dispute the origins of the Spagetti Monster because we've all seen a pasta machine and know it to exist so there can be a general consensus on something finally..

;o)

>You're a beautiful man, DJ.

Actually, seriously, that probably ought to be submitted to the folks who created the Spaghetti Monster website. What you've got here is some of the earliest known theological texts concerning this strange deity. You're an early disciple, writing the what the future will regard as ancient apocrypha of this new religion, this new understanding....

I have been touched by his noddly appendage.

"DJ" <animix\_spam-this-ahole\_@animas.net> wrote in message

>  
> They're gonna be wrangling gators and snakes in the French Quarter  
tomorrow.I used to live in Hammond Louisiana and have partaken of both snake and  
gator, garnished with shrimp with a remoulade made from Heinz ketchup, a  
small dollop of mayonaise and a larger dollop of freshly ground horseradish  
and black pepper, subsequently washed down with homemade strawberry wine.  
Sometimes I miss living in Louisiana. It was a fun place to live and to eat,  
though I don't think I drew a sober breath the entire time I was living  
there. Didn't seem to matter too much. No one else there was sober either.

>Here are some notes I copied (I have these stored as sampleslide presets)  
on lookahead makeup values

1. EDS effect. 1ms back and 78 samples forward

2.EDS effect w/.001 lookahead 1ms back and 33 samples  
forward (You might have to click the lookahead to 0 and back to 1)

3.EDS effect w/.002 lookahead, Back 2ms and forward 67 samples

4. w/.003 lookahead, Back 2ms and forward 21 samples

5. w/.004 lookahead, Back 3ms and forward 56 samples

6. w/.005 lookahead, Back 3ms and forward 10 samples

No Limit ...no lookahead...Back 1ms and forward 78 samples

" " 1ms lookahead....Back 1ms and forward 30 samples

" " 25ms lookahead....Back 27ms(25+1+1) and forward 78 samples

I don't really go beyond 5 ms for lookahead, except for NoLimit, where I usually use 25 ms lookahead.

I do know that nudging a track 7x1ms is NOT the same as 5+1+1 in Paris. I forgot what the sample diff is. I just have combinations logged that work for me and keep them as notes within the sampleslide presets.

>Hmmm.....Paris DAW

10G system drive  
2 x 100 G IDE Drives  
2 x 36G SATA drives

Cubase DAW-

60G System Drive  
100G IDE Drive  
160G IDE Drive  
2 x 250G USB 2.0 Drives

Letsee.....that's 1102 Gigabytes. Since these computers are networked and basically functioning as one DAW, I guess maybe this qualifies me for the Terabyte club?

;oP
