Subject: MAC UAD questions...help!
Posted by JJ on Tue, 06 Mar 2007 16:42:28 GMT

Hi Gang-
its about time to get me a UAD flexipack. I want to purcahse the LA2A, The
EMT and Roland space station delay with it. Can anybody recommend me the
best version for Paris 3 on a Mac Quicksliver os 9.2 . I know there have
been some software issues with Paris and different updates on the UAD. Do
i also need a wrapper?

I also want to render to disk using the LA2A. will there be any latency ssues
with this? Obvoiusly in realtime there are issues but in my use of the card
i mainly want to commit to disc.
Will i still have to compensate for latency "doing render to disc"n on paris?
The EMT is the only plug in from the flexipack i want to run "live" I notice
it uses a small amount of DSP.

Last question -does the uad effects also appear in the paris master fx section
as well as each individual channel?
any suggestions would be appreciated
John

UAD no longer supports OS 9 so you'll have to get a previous version. You
should
then check which plug-ins work with that version.

Unfortunately UAD does NOT show up on the master insert.
