There, that should be a sufficiently ominous subject line to get your attention...

If you're running WinVista on anything, under NO circumstances should you install (or allow it to be installed, via automatic update) Vista Service Pack 1, just released this morning.

I'm typing this from my laptop, which now works properly, as it did before installing Vista SP1... had to run System Restore to get it there, since hardly anything worked after SP1 installed, but you get the drift.

Peace-out, happy recording.

Neil
