Subject: Has ID stopped responding to PACE authorization requests?

---

After moving my PARIS 3.0 installation to a new machine, I've been waiting for a month now for Intelligent Devices to respond to my e-mail requests for a PACE authorization. I've read Mike Audet's May 6 post about ID ending authorizations at the end of the year, but I'm wondering if they've already stopped. Has anyone here had any recent success with a similar request or any contact at all with ID?

If ID won't authorize my legitimate and purchased copy, the license for which is registered with them in my name, I'm going to have to start looking for a version from which PACE has been removed. Could someone here give me some hints on how to go about finding such a thing? I want to avoid warez sites.

Many thanks to all,

Allen
