That HAS happened to me a few times also . after saving a project ,and opening it a few days later . some files just vanished, i know i didnt delete them . search for files came up empty.they were all on the same drive too.

I guess paris didnt like those tracks:-)

Easy Recovery Pro from Ontrack. Gets'm back everytime. Unfortunately, you're MAC.

If you find something that works as well, I highly recommend getting that drive removed as OS drive and set it up as something other than and making sure that there is zero raiding going on with it. If installed as the OS drive, you're writing to it everytime you boot and everytime you make a move to recover.

So I'm working on this project tonight, recording 6 singers on 3 mics, for a total of 4 passes saved. 12 tracks. The last take was the best, so we went to work tweaking, tuning, slipping and sliding to match phrasing w/ old vocals. An hour and a half later we're done tweaking, it's time to begin mixing. I begin playback from the top. The new tracks aren't playing. I look at the edit window. All the new tracks and little rendered sections where I tuned are blank. I open the audio window thinking that somehaow Paris has lost track of their locations. I search for files. The last take's 3 tracks are gone, as are most of the tuned/tweaked bits and pieces. All that remain are the little files from using the Paris pitch shift function (which I sometimes do when AutoTune can't or won't work - like tuning a track w/ 2 or 3 voices on it).

I look at my client (fortunately a good friend and very philosophical kind of guy) and say "I wish I could offer you something more than an apology, but the tracks are gone." I tried scavenging the disk w/ Disk Warrior (I'm a Mac guy) to no avail. As I write this Norton Utilities is searching for .paf files. I have at least one other option for looking for deleted files, but for some reason I'm not feeling overly optimistic.

Has anything like this ever happened to any of you folks? Could this be a sector of my HD suddenly gone bad? Is there some Paris bug that deletes files if you hit a certain key sequence?

Thanks...

Gantt

not on a pc but it has happened a couple of times on the mac and i

have no idea why. sorry to hear it. you did search your boot drive too as macs will put them in the library user or global folder. i've also found that mac finds don't always work the first few searches especially if the search phrase isn't exactly (case sensitive) the same.

Had a project lose edits and audio files before, but never not had the files still there. Happened on a couple of them. THought I'd lost it

all, but went back and found the audio takes by searching on the time/  
date stamp.

Don't know of any "keystroke" that could cause it.

I do recall something like this happening once (IIRC, I had  
done some punches & next time I opened up that project the  
punched-in segments were missing), but in my case  
it was a drive going bad... had some bad sectors on it. Only  
time I ever had a W-D drive go bad on me.

Gantt, did you already scan the drive for any bad sectors?  
If there are any bad ones, there's a way to isolate that section so that it doesn't try to write anything further to those regions, so that you can finish the project without having to move everything to a new drive right away. I forget how to do it, but surely someone here knows this method.
