Yes it does in the later versions. Mind you I can't get my system to work
with the later versions, so...

's cheap enough if it works, and there's a trial version, so that's the
next thing on my list to try. Thanks heaps.

It's not the getting off the chair that bothers me, it's the purchase of
6 individual hard drives for the six boots. ;o)

The CPU benchmark on the equivalent speed AMD64 and OPteron chips are
very close with the AMD 64 being very slightly higher.
This doesn't mean that the AMD 64 is necessarily faster over all.
The has better PCI bus and memory performance than any architecture out
there. This will only be noticeable though with high track count high
sample rate recording and intensive VSTi use that is sample based.
