I got an error code 7/7. I think my card is shot probably. I installed another
card that I had and I get static it almost sounds like it is out of sync.
 Anyone know what the problem is or where I can get a new card

Hi,

This error means Paris can't see the EDS card. The card or cable could be
bad or loose. Or there may be an IRQ conflict.

Sounds to me like your card is bad...

Contact "The" that is his name. He is Vietnamese and very nice guy...
his website is here... find his email and number there...

Hello...getting the same error code, but it ain't the card..PCI or EDS,
the whole setup works fine on two other computers, could it be driver-related,
??

hey, Ced-

It ain't the card, but it could well be the connection. I assume you tried
other slots.

Does someone out there remember something about this happening if there were
two scherzo drivers installed on a windows rig? I seem to remember that,
but I'm not sure.

DJ will remember.

-steve, yes, that steve. Call me sometimes!
