Hi gang. Paris skin gurus Mike Yanoska and Jim Drago are the absolute bomb when it comes to tweaking the graphic "look" of PARIS. Mike's newest offering is just great - a newly posted "Neve" skin for PARIS that features characteristic blue gray panels, and aluminum as well as classic red and blue knob caps.

Check Mike and Jim's skins out on the Wiki, and remember, play safe - always duplicate your app first and work on the renamed copy!

- K

Should know this, but I don't:

Can I use these skin thingys on a Mac - OS 9.2.2?

TG

Heya Ted - I've heard folks say "no", but I'm a bit at a loss as to why; I would have thought they would have gone into the app pretty easily with ResEdit.

I wish I had a copy of the Mac OSX PARIS app, I'd give it a try.

D'oh - OS9.

OK, yeah - I wish I had an OSX one too!

that new skin is gooooood! it really makes PARIS the best looking daw!

I'd immediately install it, if it would work with os9... kerry, do you want the os9 PARIS app in a zip file to do some experiments?

-is there a res-edit software for os9?

micha

Quote:-is there a res-edit software for os9?

ResEdit is a good tool for Mac OS9 resource editing (there's a download link for it at the bottom of the article). It's pretty likely folks have tried to use ResEdit to accomplish this before and ran into some sort of "gotcha" that kept it from succeeding. Still, nothing wrong with trying stuff out, is there? As long as you work on a copy of the app, it's not like we can break anything important.

And I don't think voiding our warranty is an issue

I tried skinning the OS9 version (with ResEdit) a while ago using the instructions for the Windows executable, and it didn't work - I think mostly because the offsets are different. Someone with more knowledge of OS9's executable structure than I could probably figure it out, though...

I gave it a shot using tools on OSX too (since I was asked previously, just for clarity I'm talking about trying to skin the *OS9* app on a computer running OSX). No luck. Folks with active knowledge of OS9 coding are getting rarer, so if anyone wants to take this on...

What we *really* need to aid re-skinning PARIS is a simple app that opens the exe, swaps out the image resources by name, and prompts a "save as". That would allow us to package the skins for easy swapping.

Jim and Mike have done the graphic work; if someone gets inspired to take on the coding side, much of what's needed may already be available on sourceforge.net.
