Hi! I installed Liquid mix on my PC, INo problem to open LM window but I get a message that I should set DAW buffer to 1024 maximum! anyone that have a cloue where I change buffer size? In paris settings ithere are cache size and I/O size settings, but I suppose some other value shall be changed somewere. Happy for any ideas1

Tony

This would be referring to buffers in a native system. . Do you have the Paris VST path routed to the directory where the Liquidmix software plugins live? What happens if you just close the message and try to use Liquidmix? You might want to try using a VST/DX wrapper. This *might* solve your problem.not sure though. Liquidmix is new territory, but if you can get this working, I'd be interested to see what kind of latency numbers result.
