Subject: CS 16
Posted by danielcornelius on Wed, 12 Dec 2012 19:23:06 GMT

I have got two MEC 442,EDS 1000 and ofcorse 2 CS 16. One is the old black one and the other one the blue.

If Paris Software/Hardware starts, both CS16 will start like it seems well. If i open a projekt where is used Mec A and B the both CS 16 are linked to one Mixer/ MEC. CS 16 old and blue works only with Mixer one.

Is it a hardware issue ? Someone have got the same problem ?

THX

Check in the projects menu for the C16 setup. Check the box for your blue pro C16 and leave the other unchecked.

Hi Wayne !
Thx for replay.

I did do that way in the CS16 and all possible combinations too. After changed Settings i have Paris restartet every time. But i doesnt works .

In the Paris Window i can select only one CS in the Submix Display Controls. Is this right ?

it should allow you to select two if there are two. Are the lights lighting up on both of them? Both EDS cards A and B show up?

Sounds like your autoload song is correctly configured - you've opened the songs where they aren't working correctly and held down the Submix button on each of the C16s in succession to see which light goes on to indicate the submix that C16 is assigned to (PARIS Reference Manual P212)?

Hi Kerry,

i got no Page 212 into my Referenze .
Got you a newer one then me ?

Have a merry Christmas

Download the Paris reference manual here:

http://intdevices.com/support/support-downloads.html

P212 - "Submix Operations"
(Link kindly supplied by thesandbox1 in the "Patch Bay" thread).

Best

Ted
