Dear All,

i'm Alex from Italy, writing here on the forum for a little help.

I bought some years ago, with other stuff, a Paris system, which I have decided now to let it go (I'm more on Protools hardware).

The Paris hardware is untested but the seller assured me that it was working.

Obviously, before selling it, I wanna be sure that everything is working perfectly; what are the minimum hardware/software requirements for a pc to be sure that all the boards/outboard are working well?

Many thanks in advance for your time

Ps: I'll soon post in the right section the list of all the hardware I have to sell.
