Room verb is 'real' heavy to one side I've found and some of the plugs that were in development also had this issue. I am not sure why that is, but it definitely is at my place. I typically end up panning up the verb return to compensate. After a while you just get used to it and use things to offset the lopsided signal, even using it to your advant

I take it back.... Never tried a U47.

;no.com> wrote:

> Wow, what an important feature to be broken

I don't miss it at all. The compact file feature took the active segments and glued them together as a single audio file without any space between them. It took up less space, but the file as a whole was unusable in any other context except that particular PARIS project.

I prefer the render feature. When I finish a PARIS project, the last thing I do is render all my tracks to disk in a separate folder from my segmented tracks. That way, if I should need to reopen the project in another DAW, there is no problem with portability.

DavidUgly.
