Hi all.

So far it's been pretty smooth sailing with Paris 3 running under win7 64 bit.

I started a mix session tonight, using a favourite string of older native plugins on inserts, and I had a random crash on exit. (Fortunately I saved prior to exiting, as these plugs caused issues in the past when I was running XP, and I know I have to save often).

But this time was different. Upon relaunching Paris after a reboot, Paris refused to load, with an error message something like: "Missing Cache File".

I checked the Paris.cfg file in the folder where Paris is installed, and it was completely blank!

No biggie, as I had a backup of the file named Paris.cfg.backup,(which I had made whilst installing Paris on my new box), and renamed it Paris.cfg. All is well again.

I then made another backup in case this happens again.

No Biggie, just thought I'd share this in case this happens to you guys. Always have a backup, especially if you have tweaked your cfg file to perfection.

Cheers,

Kim

I tried to install a new version of the waves J 37 tape plug in and had the same thing happen. I had to reload Paris, which was actually pretty easy but I had to delete the plugin first. I am not sure if was it was Mike but he said you have to use some kind of wrapper or something first and then the vst plugin. I am not sure because I would love to use the tape plugin in Paris, Right now I use it in Sound Forge to master and it works GREAT ! I wish I could use it in Paris. Besides that, everything has been very cool. Definitely have learned to save often. It is a good habit! Keep on Rocken !, Rich

Hi Rich.

Try using this:

<http://www.mediafire.com/download/tw5ug39m2pncym5/vdx33b2.zi p>

It is a vst-dx wrapper. I find the wrapped versions much more stable.

You'll have to move the j37 dll to a folder that Paris doesn't use. (or install it elsewhere).

Once wrapped, Paris will see the direct-x version, and you should be good to go.

Let me know how you get on.

Kim
