>

I have a 60gb photoPod. I rip to 160kbps AAC. I use iTunes and the

iPod for casual listening - don't want to have to have a TB array just

to hold my cd collection. If I want to do critical listening, I'll

just pull out the original cd and listen to it on a real cd player.

Since iTunes is for casual listening, I don't really notice the losses

involved in squishing.

pabYehhh, Happy New Year to you all. Now I'm tired of looking at all the colored bombs exploding all around here for plenty of hours, so I'm going to bed, trying to sleep with closed headset without any music, dreaming sweet

about all the colors from the New Year firework battles;-)

when paris is playing.

Rendering to different lengths is only a no no if you are going to use a  
stereo native insert on the 2 different lenght tracks.

otherwise...it's no problem.

all other tips are valid

I've also seen bad things happen when messing around too much in the "markers"  
window. I don't leave it open anymore than is necessary, and save before  
deleting or renaming markers.
