Hi all,
Just played around with mike's reverb, and wanted to share my impressions.
It's a bit hard to tweak, parameters are linked in a efficient but non intuitive
way, at least for me. Some settings combination (decay reflexion) can generate
low freq noise. I feel the learning curve is quite longer, but it certainly
allow a wide variety off setting. By the way, it would be fine to have more
predelay, and a possibility to set up the delay of positions.
When properly adjusted, it sound superb, very classy. It doesn't add cloudy
noise, but kinda "bring the outlines to light". It's a kind reverb you ear
only when you mute it, if you get my point. I could'nt have this with altiverb
and SIR.
So, well done mike, i'm happy with it.
damien.

Hey Damien

Care to share any presets you may have created?

Don

Thanks for the review, Damien!

I'm glad that you're happy with it. I just love it, too.

All the best,

Mike

Will you be posting your presets on the Wiki forum Mike?

Hi Don,

These aren't my presets, but I just now lifted them, as closely as possible, from my DP/4. At the very least, they are good starting points. I generally just use the default preset and tweak a little bit from there. I'll be checking these out on my next project, though.

All the best,

Mike
