Subject: Plextor CD writer...can't CD text to work, any answers?

Posted by [Rod Lincoln](#) on Tue, 11 Nov 2008 06:44:50 GMT

[View Forum Message](#) <> [Reply to Message](#)

---

I'm completing a project that I'm mixing and also mastering. I'm trying to put CD text on the CD but I can't get it to work. I've got a Plextor Plexwriter Premium. It says it's CD text capable. I'm using wavelab 4.0 and have typed in the CD text.

When I burn the CD there's no text. Also, when I click on the infor for the Plextor the "allows CD text" box is not checked, and it won't allow me to check it. I noticed that (after doing some google searching) that when I try to rip a commercial CD that has CD text (checked it with another computer) it won't display the text. Has anyone here had this experience with Plextors or have any knowledge about this in general? Does it have anything to do with CDDDB?

Thanks

Rod

I have Wavelab Essential 6 for Windows and I believe it's about the same system in different Wavelabs when burning a CD.

Have you marked "Enable CD-Text Burning" in "CD text for the disk itself" in the CD-Text Editor?

If you're using Windows, you can also try Plextors own burning programs for Plextor burners, the free "Plextools Professional LE" or " PTP XL" to write the text, as far as I remember.

Hi Rod,  
Whats the exact model of the drive?

Hi Chris, It's the Plexwriter Premium. That's all I can find in the way of  
model information. Under model number, it says "Premium" I got it in 2003,  
so it's not newer version 2, it's the older one.

I have had the same burner for years and have no problems at all. Burned projects in Wavelab Essential and Essential 6 and tested the CD's with Plextools for problems. CD text have always showed up. In Plextools you can also see what features the Plextor burner have. It will show up if the cd-text can be burned. If not, I think the burner have a problem.

Hi Rod,

Confirm which firmware you are using on the drive.

I think you can do this in Wavelabs CD info page. If not then use Nero's info Tool to do it.

<ftp://ftp6.nero.com/tools/InfoTool.zip>

If your firmware is lower than version 1.07 then you should update it.

[http://www.plector.com/english/support/downloads/Premium\\_107.exe](http://www.plector.com/english/support/downloads/Premium_107.exe)

If that doesn't work then make sure you are using the most recent WL4 update.

[ftp://ftp.steinberg.net/Download/WaveLab/4.0.1.B/Pc/WaveLab\\_401b\\_Patch.zip](ftp://ftp.steinberg.net/Download/WaveLab/4.0.1.B/Pc/WaveLab_401b_Patch.zip)

So you have a Plextor Premium on a pc with Wavelab, and you have no problem burning CD's with text?

CD Text and Track/artist/album info that displays on a computer are two different things. The latter is generated by CDDB, or freedb which is an internet database that compiles song and artist info. When a disc is loaded in a computer, the host program (iTunes for instance) will look for Track info, by comparing the data of the disc just loaded with profiles of discs already in the database.

It compares things like number and length of tracks. If you have a disc that you want profiled in the database, enter all the info in your host program, then "submit track names" under advanced in iTunes. This will mean that anytime that disc is inserted by anyone, anywhere into a computer connected to the web, all the track/artist/album info will be available to the user.

CD text usually contains similar info to CDDB, but it is displayed on hardware units, like dedicated set top disc players and car stereos. It normally would not display on a computer.

I think...

Ted

see if the

As I've said. Used it for years. Now I'm using Plextor PX-755 too. Have you anytime upgraded the firmware for the burner?

If not, go here:

[http://www.plextor.com/english/support/support\\_downloads.htm](http://www.plextor.com/english/support/support_downloads.htm) I#firm

and download and install the last firmware for the burner, to see if that will help. You can also see if you have the last Wavelab CD/DVD recorder updates for PC Windows here:

[http://www.steinberg.net/en/support/steinberg\\_support\\_downloads.html](http://www.steinberg.net/en/support/steinberg_support_downloads.html)

Hope some of these things will help you and good luck.

By the way, Plextool is a really strong product to both burn and afterwards control the quality of the Plextor burnings. I know Brian T was one of the first here to use that burner with Plextools. He wrote much about it here, so much that I bought the burner too. Do you still have the CD with the software, following with the Plexwriter Premium buying?

I've just tested an audioCD burned with Wavelab Essential 6 on one of my other computers, with an Optiarc AD-7200S burner. Now it's playing on the computer with Plextor/Plextools in Plextools. The CD-text are showing up everything from the CD that was written in Wavelab on the other computer. These things are not showing up at all in Windows Media Player, as far as I can find out.

Someone who knows how to get CD-text to show up in Win MediaPlayer?

Thanks, yes, I bought the Plextor because of Brian T also. Never any problems, but I've never tried to burn CD txt before now. I emailed plextor tech support, and the said wavelab didn't fully support the plextor drive. Now that you tell me you've been using it with wavelab essentials, I think that was BS. I haven't upgraded the firmware for a few years. It's 1.02 or something like that. One thing that concerns me is it looks like that's the firmware for the Premium-U, which I think is the usb version. I have the premium internal. There doesn't seem to be any updates beyond 1.02 for the internal. Chris Ludwig posted the same links for Plextor and Wavelab. I haven't installed the updates yet, but will try to get it done today.

Read the post by Ted Gerber at the bottom of this thread. It appears that windows media player, and maybe itunes also, gets the track info from CDDB or fredb instead of CD text.
