Hi Everyone,

I just added a bunch of the effect plugins to my PARIS system. The menus for the effects go so large that the bottom portion of the menu is truncated.

I can't see the reverbs, however if I move my mouse down to where they should be I can still select them. Since I'm just guessing at the location it becomes a trial and error process.

Is this a known issue? Is there a fix?

Thanks,

Rich Kelley (remove the %% from the email address)

Don't quote me on this but I think there is a limit of 50 visible effects in the drop down menu

Are you running 3.0? The effects limit was a problem with the menu under 2.2, and the limit was a lot less than 50. AFAIK 3.0 fixed that problem. When I was developing I had tons of plugs installed and never saw a problem with 3.0

That must be it as I saw the same issue and have 2.2 -

so we have to buy 3.0 and deal with PACE etc. on a system that is not made any more... Ouch

Hi Chuck,

Yes, I'm running 2.2, not 3.0. I'll buy 3.0 withOUT PACE (is this possible?), but you couldn't give it to me free with PACE.

Thanks for the help.

Rich Kelley

'There is a simple anti pace app out there that works dandy like.
