Hi All

Is there a proper method to installing FXpansion (DJ's zip) i.e. where do
you put it how do you access it blah de blah

The only reason I ask is the last time I tried to install it, it totally
hosed Paris requiring a complete reinstall.

Thanks

Don

If you install it and it crashes paris, just open it again and click "full
reset" and exit. Paris should be fine after that.
Then find the offending plugin by adding one in at a time and running Paris
after each addition. Tedius, I know, but you'll find the problem.

Unfortunately when it crashed Paris I couldn't reopen it - unhandled
exception C000000005 or some such crap and then the infamous Black Screen
of Death

Muahahaha

Complete blowout and reinstall of Paris required

Don
