Been a while, again. Glad to see this place is thriving.

I'm getting that "data streaming" error code again, you know, "adjust the parameters or get a faster drive" thing. I'm running WinXP on a dual Pentium 4 3 gig with a gig of RAM. Both drives are basically new and 7200 RPM, and both are mostly empty, with the audio drive being recently formatted.

I've got 1 EDS card and 1 MEC, with the system synched to a Lucid Genx6-96, along with 2 Kurzweil boxes. I'm running some version of Mike's multi-processor drivers, the first one that had the C-16 issues sussed out.

Any help appreciated. BTW, I'm healty and happy again, mostly, so any help I can do with further beta-testing or whatever is my pleasure.

Jimmy
