[View Forum Message](#) <> [Reply to Message](#)

Anyone know a way to setup a car stereo so both front seat passengers get a stereo sweet spot with studio like sound ?

I currently have a pathfinder suv.

Also, is there a car stereo with an eq where you draw the curve on a touch screen or with lots of eq presets ?

Thanks

I might be looking at this from a simplistic angle, but... isn't a car the worse possible environment for listening to music? It's a noisy space, and is grossly asymmetrical (the listener is, by definition, closer to either the left or right channel). I would have ventured a guess that the best you

can do is (a) compress the sound in order to cope with the road/wind noise, and (b) find a semi-decent stereo that gives you just enough tweakability to achive acceptable results. Anything beyond that is wasted, is it not?

Having said that, I'd be curious about others' opinions on car audio...

Dan

Here's how I'll be addressing the stereo issue in my truck.

Well, I spend a lot of time in my car and want it to just give me a balanced even stereo image and some nice eq capability that I can easily change from album to album.

Yeah, cars are tough but I want something better than the crap I have. That headliner is too high for my taste. I'll probably put something on the dash and just aim it. I really don't care at all how it looks, I just want it to give me a great stereo image sweet spot.

you forgot all the reflective glass involved at different angles too.
You can make 'em loud and somewhat flat, but sweet spot is pushing it pretty hard, really.

The worse the environment, the more some DSP muscle makes a difference.

Here's an interesting one;

Hi John,

The only thing I do is make the left speaker one notch louder because as I sit in the driver's seat I hear the right speaker more. It helps balance the space for me . . . the driver.

Yeah, i've done that for years. Now I'm ready to have highs and mids aiming directly at my ears instead of at my ankles. Turns out my ankles can't hear shit !

I also just realized that I don't need a tuner because i never listen to the radio, just mp3's or cds.

My times are a changing.

Nah, foam will sound too dead... I would recommend some quadratic diffusors...

David.

i don't think it's legal to drive with headphones, though that's really a fantastic idea Martin. I could get killer sound (if i don't get killed) with perfect stereo image. hmhhh

It's illegal in California at least.

You could always get a power inverter and run one of these between preamp and power amp:

http://www.bssaudio.com/productpg.php?product_id=31

Don't laugh, I've considered it...

Many years ago I rip'd out the manufactures stereo system and put a new stereo, a pwr amp and a pair of dual cone speakers in my Toyota P/U. The pwr amp made all the difference in the depth, fullness and power feeling. Although not a studio, at least it filled the cab with full range pwr and depth. It was just a single pwr amp, not the kind of pwr amps that need an extra car battery and a trunk full of woofers. Simple yet round and deep. \$300 bucks back in 1977.

Isn't there something with "bluetooths" out there, as used with
mobiles when driving?
