Hi folks,
Somewhat unfortunately, I've got some serious tidying up of drum tracks to do. It's driving me nuts! (Anyone who wants an edit job / drummers with studios looking to record could try propositioning me!).
I've got drums recorded across 12 channels, but much of the playing needs "quantising", ideally around a groove (i.e. the groove when he gets it right; or just reprogramming it from scratch). I'm a bit clueless when it comes to the possibilities offered in cubase / recycle, but presumable this would be the way forward, rather than trying to do it all by hand in Paris. Problem with recycle, as far as I understand it, it that it works on mono, maybe even stereo, files, but not 12 at once.

Hot tips greatly appreciated.
Thanks,
Dan

You are correct about Recycle, it will not work across 12 tracks. I suggest you move the wave files to Pro Tools and do this with Beat Detective (not

the LE version which only works on two tracks.) You should be able to find many Pro Tools users who will take this on.

It is much easier if it was recorded to a grid. Saying you want to quantize to section of the song he did well, will only work if the tempo is exactly the same throughout the track. This is unlikely if his playing was that sloppy. Beat Detective will allow you to extract an averaged tempo map out of the performance and quantize to that, but it may still speed up and slow down.

the groove on top of the generated tempo map.

If its just a matter of a few late kick or snare hits, I would do it in Paris, but be sure to cut and move all 12 tracks simultaneously. If you need do advanced surgery, Beat Detective is the best tool for the job.

Or - how about have them perform the song the way it's supposed to sound? Sorry, I couldn't help myself. !! Even when clients joke to me about stuff like this, my immediate response is "What's your budget?". Ba dum tshhhh.

And, here's one of the two jokes that I consistantly remember.....it's a one-liner....

"So many drummers, so little time."

best of luck Dan,
-Carl

HI ,
REcycle is pretty much a dead app at this point.
All the major audio apps now Cubase/Nuendo, Sonar, Ableton, Pro Tools,
Samplitude all offer audio quantizing on one of more tracks at a time.

I only charge \$0.10 per edit per track...work is guranteed...and by the
sounds of it I'll be able to retire after this edit job

;-)

:O}..... I have been putting in an average of 70 hours a week over the last month in my day job. Things should ease up a bit by the middle of November, but the next 10 days are going to be very intense. I'll be dropping in here from time to time to bitch and whine.

Subject: Re: Drum editing tips needed (Cubase SX)
Posted by [Dan B](#) on Wed, 13 Sep 2006 14:35:20 GMT
[View Forum Message](#) <> [Reply to Message](#)

Thanks for the replies.

The way I see it, my options are:

1) Outsource this to someone. That'd certainly be a relief, though the disadvantage would be I wouldn't learn how to do it myself. Presumably export to protocols (omf/omv?) function in Paris would help here (I've never used it), and then someone could get to work on Beat Mapper.

2) I have Cubase SX but rarely use it, certainly not for anything this clever! Any ideas how the audio quantise (ideally to a predefined groove rather than a precise click) works?

(BTW, all the drums were recorded to a click; the playings just a bit off.

I know, get a new drummer...!)

Thanks for any tips,

Dan
