>Not to open a can of worms here but, my Paris comp is a PC (XP)
My wife works on a g4, and the comp I am typing on now is an ibook.

The PC is way faster, but the MAC OS is so much smoother. No wierd quirks at all.
It may have quirks if I put 2 EDS cards and a UAD card in though I suppose.

>Pete, have the PC shop check all the headers/connectors and that the stand offs mounting the motherboard to the chassis are connected where they should be and NOT connected where they should not be.. I've had occasion to note that some case manufacturers mounts suck and wonder how they kept from getting sued by users with blasted power supplies/motherboards. This may or may not be the case, I don't know your history/vender info, but it's something to check out.
