Greetings Paris friends, I have had to do a fresh install of Paris after a hard drive fail, using Mike's latest installer,

now getting this error code, "Error in initializing Paris engine", never seen this before, anyone know what is my problem?

The install looks proper, however the Scherzos don't show up in device manager, system devices, as they would normally

do in past installs. Same XP machine I've used for a long time, just a new XP install, 2 EDS cards look good,

Black Mec, same as always, so some issue with software?

Any suggestions, I have a spare drive that has Paris on it, which will load and play Paris but the XP install is

ginky and not stable, hence the need for fresh install on new drive. I'm pretty sure an updated machine is in my future,

but until then would like to keep this one in the game.

and BTW, Mike Audit is cool as they come, his work is amazing, and thanks again to Keri for keeping this

thing afloat! Where can I donate to the effort to keep the forum going?

After 20 years, Paris still sounds great, thanks to all!

Johnny
