How do I split a midi drum track into multiple tracks, one for each sound?

Thanks Rob

Rob - select the midi part for that drum track and use the "Dissolve Part" function from the MIDI menu, then in the dialog select "Separate Pitches". This will create a new midi track for each pitch (in the case of midi drums, each drum).

That's the way it's setup in Nuendo 4 at least, but should be similar if not the same in SX3.

Regards, Dedric
