I sure appreciate all the helpful tips posted here and wanted to share that I found the solution to a problem when I migrated Paris to Windows XP Pro.

The problem was that the EDS compressors were not working for the channel inserts. It was frustrating since I really like using them and all the other insert efx were working.

I'm a big fan of Chuck's plugins and had installed all of them. Unfortunately, on my box, there was a conflict. When I removed all but the basic EDS effects dlls from the system32 folder the compressors worked again.

I still have the eventiter and modulation efx working so that good since I like them alot too.

Anyways, since I had posted in the midst of my confusion, thought I post the solution too.

I hadn't seen that reaction yet, but I think some of the skunkworks plugs were deemed too buggy and it was suggested to not install them. Which of them did you have installed?

I had installed all of the skunkworks plugs - I removed all but the eventiter and the mods.

I really love the plugs and as time permits, I'll start adding them in again until I isolate which one was causing the problem on my computer.

FreakQ is the one that seemed to cause the most issues I believe, and it seemed like there was a little 3 pack that had something in it that created issues, name escapes me at the moment. Define "all" of them that you installed and I can likely pick the one out.

My experience is that "PC Freebies" is the culprit. I had all kinds of weirdness going on until I uninstalled them.

I think PC Freebies was the problem - although right now just for troubleshooting, I also removed FreakQ, I did previously have that running with no problem.

## 7. Eventiter

Sounds like the freebies and FreakQ are out. Any others?
