I am trying to install Ensoniq Paris to work in Win 7 64 , I have last drivers that should work with Win 7 32 , but the problem is that Win is not seeing my Ensoniq card is anyone trying this ?
What shall i do ?

Post some help please))

Cheers

Got Paris running here on win7 - 32, been a while since I set it up so I forget the hoops I had to jump through but I know its possible.

Have no luck even recognising a card in win 7 64

People please chime in weth your experience .

I am using Paris just as ADDA conversion with RME 9652 , so I dont need anything special , just for card to work

Thaaankkksss

Be sure your BIOS is setup to allow a Plug and Play OS. If your card is working properly, Windows WILL see it and complain vigorously about you providing a driver for it.

Has Mike released the 64 bit driver yet? I assumed that was still under wraps. Win 7 32 has been successful under certain circumstances...mine wasn't one of them. I finally chalked it up to trying to use a 2003 vintage 2.8 ghz HT P4 system (plenty for Paris). Something about that combo never synced up just right and I just Blue Screened upon loading Paris. Finally settled for XP.
